

Eventix

Test Plan — Session Management & UI Fixes

Date: March 2026 | Prepared for: QA Tester

1. Scope

This test plan covers the following fixes applied to the Eventix event registration system:

#	Fix	Description
1	SESSION_VERIFIED guard	Prevents session.php from running twice per request, eliminating the session_invalid logout bug.
2	Absolute redirect path	session.php uses an absolute URL so redirects work from any subdirectory.
3	role_name sync	role_name is always synced from role so both session keys are available.
4	Persistent session	Session cookie lifetime set to 30 days; auto-restores from device cookie after browser close or PC shutdown.
5	Timeout bypass	1-hour timeout is refreshed instead of expiring when a valid trusted device cookie is present.
6	Visible card links	Dashboard card links (Explore, View, Manage) always show in red without requiring hover.

2. Files Changed

File Path	What Changed
eventsys/codes/includes/session.php	Guard constant, absolute redirects, role_name sync, 30-day cookie, auto-restore, timeout bypass.
eventsys/codes/php/dashboard/home.php	Card link color hardcoded to #e63946 — visible at all times without hover.

3. Test Environment

Item	Details
Application URL	localhost/Registration-System/eventsys/codes/php/
Server	XAMPP running on localhost
Primary Browser	Google Chrome (latest)
Secondary Browser	Mozilla Firefox or Microsoft Edge
Database	MySQL via phpMyAdmin — event_registration database

Item	Details
Test Accounts Needed	1x role='user', 1x role='event_head', 1x role='admin'

4. Priority Legend

Priority	Meaning
Critical	Must pass. System is broken or unusable if these fail.
High	Should pass. Core functionality that directly affects users.
Medium	Nice to confirm. UI and quality-of-life items.

5. Test Cases

Instructions: For each test case, mark the Result as PASS, FAIL, or BLOCKED. Write observations in the Notes field for any failures.

TC-01 — Basic Login — User Account

Priority	High	Module	Authentication
----------	------	--------	----------------

Preconditions: User account exists with role='user'. Browser cookies cleared.

#	Test Step
1	Navigate to the Eventix login page (index.php)
2	Enter valid email and password
3	Click Sign In
4	If OTP prompt appears, enter the 6-digit code sent to email/SMS

Expected Result:

User lands on the Dashboard (home.php). No session_invalid error. Sidebar shows correct navigation items for a regular user.

Result	Tester	Notes	Date
☒ PASS ☐ FAIL ☐ BLOCKED	Nolluda		7/4/26

TC-02 — Dashboard Card Links Always Visible

Priority	Medium	Module	Dashboard UI
----------	--------	--------	--------------

Preconditions: Logged in as any role.

#	Test Step
1	Log in and land on home.php
2	Without hovering, check if 'Explore' link on Browse Events card is visible
3	Without hovering, check if 'View' link on My Registrations card is visible
4	Hover over each link and observe any change

Expected Result:

'Explore' and 'View' links are visible in red (#e63946) at all times without hover. On hover, color darkens slightly and an arrow appears.

Result	Tester	Notes	Date
☒ PASS ☐ FAIL ☐ BLOCKED	Nolluda		

TC-03 — Browse Events — Participant Access

Priority	High	Module	Authorization
----------	------	--------	---------------

Preconditions: Logged in as role='user'.

#	Test Step
1	From the dashboard, click the 'Explore' link on the Browse Events card
2	Observe the resulting page and URL

Expected Result:

events.php loads successfully with the event list. No session_invalid error and no automatic logout occurs.

Result	Tester	Notes	Date
☒ PASS ☐ FAIL ☐ BLOCKED	Nolluda		

TC-04 — Session Persists After Browser Close

Priority	Critical	Module	Session Management
----------	----------	--------	--------------------

Preconditions: Logged in as any role. Do NOT click Logout.

#	Test Step
1	Log in and confirm you are on the dashboard
2	Close the entire Chrome browser (all tabs and windows)
3	Wait at least 10 seconds

#	Test Step
4	Reopen Chrome
5	Navigate to the dashboard URL

Expected Result:

User lands directly on the dashboard — no login page, no session_invalid error. Session is automatically restored from the trusted device cookie.

Result	Tester	Notes	Date
☒ PASS ☐ FAIL ☐ BLOCKED	Nolluda		

TC-05 — Session Persists After PC Shutdown

Priority	Critical	Module	Session Management
----------	----------	--------	--------------------

Preconditions: Logged in as any role. Do NOT click Logout.

#	Test Step
1	Log in successfully and confirm dashboard is showing
2	Fully shut down the PC (Start → Shut Down, not restart)
3	Boot the PC back up
4	Open Chrome
5	Navigate to the app dashboard URL

Expected Result:

User lands on the dashboard without being prompted to log in. Trusted device cookie auto-restores the session.

Result	Tester	Notes	Date
☒ PASS ☐ FAIL ☐ BLOCKED	Nolluda		

TC-06 — Manual Logout Clears Session and Cookie

Priority	Critical	Module	Authentication
----------	----------	--------	----------------

Preconditions: Logged in as any role.

#	Test Step
1	Click 'Logout' in the sidebar
2	Click 'Confirm' in the logout modal

#	Test Step
3	Observe the redirect
4	Close and reopen Chrome
5	Navigate back to the dashboard URL

Expected Result:

After logout, user is sent to the landing/login page. After reopening Chrome and navigating back, user is NOT auto-logged in — login page is shown. Device cookie was cleared.

Result	Tester	Notes	Date
☒ PASS ☐ FAIL ☐ BLOCKED	Nolluda		

TC-07 — Different Browser Has No Auto-Login

Priority	High	Module	Session Management
----------	------	--------	--------------------

Preconditions: Logged in on Chrome.

#	Test Step
1	While logged in on Chrome, open Firefox (or Edge)
2	Navigate to the dashboard URL in Firefox

Expected Result:

Firefox shows the login page. No auto-login — the trusted device cookie only exists in Chrome.

Result	Tester	Notes	Date
☒ PASS ☐ FAIL ☐ BLOCKED	Nolluda		

TC-08 — Event Head Role — Login and Persistence

Priority	High	Module	Authorization
----------	------	--------	---------------

Preconditions: Account with role='event_head' exists.

#	Test Step
1	Log in with an event_head account
2	Observe the dashboard for the Event Organizer badge and Manage Events card
3	Close Chrome, reopen, and navigate back to the dashboard

Expected Result:

Event head sees dashboard with 'Event Organizer' badge and Manage Events card. After browser close and reopen, session restores with event_head role intact.

Result	Tester	Notes	Date
☒ PASS ☐ FAIL ☐ BLOCKED	Nolluda		

TC-09 — Admin Role — Login and Persistence

Priority	High	Module	Authorization
----------	------	--------	---------------

Preconditions: Account with role='admin' exists.

#	Test Step
1	Log in with an admin account
2	Confirm redirect goes to admin_dashboard.php
3	Close Chrome, reopen, navigate to the admin dashboard

Expected Result:

Admin is redirected to admin_dashboard.php on login. After browser close and reopen, session restores with admin role intact.

Result	Tester	Notes	Date
☒ PASS ☐ FAIL ☐ BLOCKED	Nolluda		

TC-10 — OTP Flow — New or Unrecognised Device

Priority	High	Module	Authentication
----------	------	--------	----------------

Preconditions: Clear all cookies for localhost in Chrome before starting.

#	Test Step
1	In Chrome: Settings → Privacy → Cookies → See all site data → search 'localhost' → Delete all
2	Navigate to the login page
3	Enter valid credentials and click Sign In
4	Check email or SMS for 6-digit OTP code
5	Enter the OTP on the verify_otp.php page

Expected Result:

OTP verification page appears after login (new device, no trusted cookie). After correct OTP entry, user lands on the dashboard without session_invalid.

Result	Tester	Notes	Date
☒ PASS ☐ FAIL ☐ BLOCKED	Nolluda		

TC-11 — Trusted Device — No OTP on Return Visit

Priority	Medium	Module	Authentication
----------	--------	--------	----------------

Preconditions: TC-10 already passed — device is now trusted.

#	Test Step
1	Log out using the Logout button
2	Log in again with the same credentials on the same Chrome browser

Expected Result:

No OTP prompt — user goes directly to the dashboard. Device is already trusted so OTP step is skipped.

Result	Tester	Notes	Date
☒ PASS ☐ FAIL ☐ BLOCKED	Nolluda		

TC-12 — QR Scanner — Active Events Only in Dropdown

Priority	Medium	Module	QR Scanner
----------	--------	--------	------------

Preconditions: Logged in as event_head with attendance.qr.scan permission.

#	Test Step
1	Navigate to scan_qr.php
2	Open the event selection dropdown
3	Check which events are listed

Expected Result:

Only events where end_time >= current date/time appear in the dropdown. Past/ended events are not listed.

Result	Tester	Notes	Date
☒ PASS ☐ FAIL ☐ BLOCKED	Nolluda		

TC-13 — No session_invalid Error During Navigation

Priority	High	Module	Session Management
----------	------	--------	--------------------

Preconditions: Logged in as role='user'.

#	Test Step
1	Log in as a regular user
2	Click Explore → Browse Events page
3	Click View → My Registrations page
4	Click Attendance in the sidebar
5	Click Event Calendar in the sidebar
6	Navigate back and forth between pages at least 5 times

Expected Result:

No session_invalid error appears on any page during navigation. User remains logged in throughout.

Result	Tester	Notes	Date
☒ PASS ☐ FAIL ☐ BLOCKED	Nolluda		

6. Test Summary Sheet

Fill in after all test cases are completed.

ID	Test Case Title	Priority	Result	Notes
TC-01	Basic Login — User Account	High		
TC-02	Dashboard Card Links Always Visible	Medium		
TC-03	Browse Events — Participant Access	High		
TC-04	Session Persists After Browser Close	Critical		
TC-05	Session Persists After PC Shutdown	Critical		
TC-06	Manual Logout Clears Session and Cookie	Critical		
TC-07	Different Browser Has No Auto-Login	High		
TC-08	Event Head Role — Login and Persistence	High		
TC-09	Admin Role — Login and Persistence	High		
TC-10	OTP Flow — New or Unrecognised Device	High		
TC-11	Trusted Device — No OTP on Return Visit	Medium		

ID	Test Case Title	Priority	Result	Notes
TC-12	QR Scanner — Active Events Only in Dropdown	Medium		
TC-13	No session_invalid Error During Navigation	High
